

Teslin Lake Bird Observatory Station Checklist (2013)

The bird species checklist shown below represents all species observed to date at the Teslin Lake Bird Observatory. Species observations are shown separately for the two sites where the observatory has been operated, this includes: Nisutlin Bay (2005) and Ten Mile Point (2006 – current).

To assign a general level of the number of records at the observatory, the following classifications are made for each species:

- Annual – species observed annually
- Annual (rare) – species observed annually, however, it is observed infrequently and/or on a small number of days
- Casual – more than one record, but not observed annually
- Accidental – one record to date
